Released: March 3, 2010

2009 Corn Production a Record High for Kansas

Corn production in 2009 totaled 598.3 million bushels, up 23 percent from last year. There were 4.10 million acres of corn planted during 2009, up 250,000 acres from 2008. Area harvested for grain, at 3.86 million acres, was up 230,000 acres from the previous year. Statewide, the corn yield averaged 155 bushels per acre, up 21 bushels from 2008.

During April, May and June, rainfall was above average across the State. Topsoil and subsoil moisture supplies were mostly adequate or surplus in all districts during this time. Corn planting was completed in favorable soil moisture, but was delayed by wet field conditions. By May 10th, only 48 percent of the acreage had been planted compared to the average of 76 percent for that date. Crop development lagged behind throughout the growing season due to the later planting. Mostly adequate soil moisture conditions through the growing season allowed corn to progress well with the crop condition being rated good or excellent a majority of the time. On August 30th, the crop was rated 9 percent very poor to poor, 24 percent

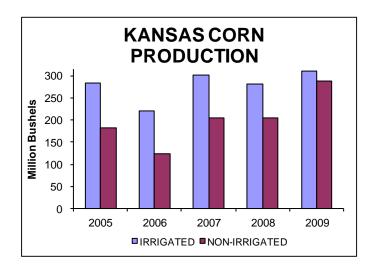

fair, and 67 percent good to excellent. Corn harvest was late in 2009, not getting started until mid-September. Harvest was delayed by rain and snow throughout the fall with only 52 percent complete by November 1st, 34 points behind normal. Many fields were not harvested until late November or December.

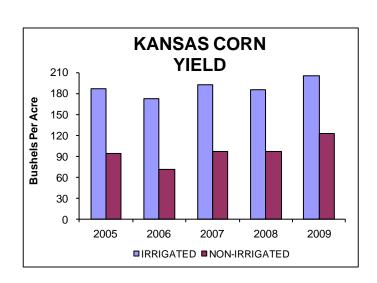

<u>County Production</u>: Sheridan County recorded the highest production in 2009, with 20.9 million bushels. The second and third ranked counties were Brown, with 20.4 million bushels and Haskell, with 20.2 million bushels.

<u>County Harvested Acreage</u>: Thomas, Sheridan, and Brown counties had the largest harvest acreage, with 150,000, 135,000, and 117,000 acres respectively.

<u>County Yield</u>: Meade County had the highest yield in 2009 with an average of 225 bushels per acre, the best county corn yield in Kansas history. Gray County ranked second in 2009, with 219 bushels per acre, while Haskell ranked third with 212 bushels per acre.

NOTE: The County Estimates are also available on the Internet at http://www.nass.usda.gov/ks.
